

# KIWI Flashlight

Model No. KWC2

Imagine a flashlight that comes with no cables or wires to charge it from and does not require any battery replacements. This is the Kiwi Flashlight; the greenest portable lighting source on the market.

You can charge it by cranking or from the sun. It can even be charged from room light.

So why is Kiwi Flashlight different?

- It holds onto its power for several months, offering you a handy source of light whenever you need it.
- It is beautifully designed and small in size so that you can fit it easily in your pocket or purse.
- It has one of the best solar panels to speed up the charging process.
- And on top of all of that, Kiwi Flashlight is a green alternative compared to other flashlights.
